

- 1) The check() method of LockedActivity.java class, passes an instance of the activity, using "this" keyword, which is a constant
- 2) In the ensureUnloock() method, the parameter "a" is used in Intents i, j and PendingIntent pJ
- 3) Once the intent is fired, the PendingIntent is received by onCreate() of PinActivity.java, and is written into the SINK
- 3) Thus, the data does not flow from the suspected SOURCE, and the flow is classified as FALSE POSITIVE
