

Id : ds-294

Result : False Positive

Reason : All variables are constants

Sink statement : Line 52 in the screenshot below

```
49
50
51  
52     @Override
53     public void onUpgrade(SQLiteDatabase db, int oldVersion, int newVersion) {
54         Log.i( tag: "greenDAO", msg: "Upgrading schema from version "
55             + oldVersion + " to " + newVersion + " by dropping all tables");
56         dropAllTables(db, ifExists: true);
57         onCreate(db);
58     }
59 }
```

The function onUpgrade is a SQLiteHelper lifecycle method and is called only by the predefined android classes. This method is not explicitly called in the given application. Hence for the log statement the variables oldVersion and newVersion are always constant.
