

Id : ds-1329

Result : False Positive

Reason : All variables are constants

Source statement : Line 322 in below screenshot.

```
317
318     m_resolveListener = null;
319
320     if (m_stopLatch == null)
321     {
322         final InetAddress addr = new InetAddress( nsdServiceInfo.getHost(), nsdServiceInfo.getPort() );
323         serviceInfo.connector = new ChannelConnector( addr, m_serviceName );
324         m_collider.addConnector( serviceInfo.connector );
325
326         resolveNextLocked( m_serviceName );
327     }
```

The return value of the source statement `nsdServiceInfo.getPort()` is passed as an argument to the Android API `'new InetAddress()'` and hence the return value `'addr'` is not considered to be tainted.
