Id : ds-1456
Result : False Positive

Reason :

Source statement : Line 322 in below screenshot.

```
317
318          m_resolveListener = null;
319
320          if (m_stopLatch == null)
321          {
322              final InetSocketAddress addr = new InetSocketAddress( nsdServiceInfo.getHost(), nsdServiceInfo.getPort() );
323              serviceInfo.connector = new ChannelConnector( addr, m_serviceName );
324              m_collider.addConnector( serviceInfo.connector );
325
326              resolveNextLocked( m_serviceName );
327          }
```

The return value of the source statement nsdServiceInfo.getPort() is passed an an argument to the Android API 'new InetSocketAddress()' and hence the return value 'addr' is not considered to be tainted.
