SOURCE
Database.java
getHistory()
Cursor c = ...;
do {
list.add(new HistoryEntry(c.getString(chanIndex), c.getString(boardIndex),
c.getString(boardpageIndex),
c.getString(threadIndex), c.getString(titleIndex), c.getString(urlIndex),
c.getLong(dateIndex)));
} while (c.moveToNext());
Line 202

HistoryFragment.java
HistoryAdapter()
Accesses only list.date, which is of type Long.
Can be ignored
Line 196

ShareActivity.java
handleIntent()
tab.title = entity.title;
tab.webUrl = entity.url;
tab.pageModel = UrlHandler.getPageModel(entity.url);
adapter.add(tab....)
setListAdapter(adapter)
Line 135

adapter

ShareActivity.java
onItemClick()
item = getListAdapter().getItem()
Data Accessed: item.getLeft().pageModel.chanName;
item.getLeft().pageModel.boardName;
item.getLeft().pageModel.type
item.getLeft().pageModel.threadNumber

1) item.getLeft().pageModel in onItemClick() method,
returns an object of type UrlPageModel
2) Futher in the function, only chanName,
boardName, type and threadNumber are accessed,
which are different from the data that is being sent by
the SOURCE
3) To get the PageModel object, we pass a URL,
which comes from the source.
4)However, as seen from the screenshot, data in the
PageModel object does not contaain any data that
comes from the SOURCE

Thus the flow is classified as FALSE POSITIVE
