Id : ds-1401
Result : False Positive

Reason : All variables are constants

Sink statement : Line 202 in below screenshot.

```
196                 if (audioVolume != m_audioVolume)
197                 {
198                     editor.putString( KEY_VOLUME, Integer.toString(audioVolume) );
199
200                     final int audioStream = MainActivity.AUDIO_STREAM;
201                     final AudioManager audioManager = (AudioManager) getSystemService( AUDIO_SERVICE );
202                     Log.d(LOG_TAG,  msg: "setStreamVolume(" + audioStream + ", " + audioVolume + ")");
203                     audioManager.setStreamVolume( audioStream, audioVolume,  flags: 0 );
204
205                     m_audioVolume = audioVolume;
206                 }
```

The variables received by the sink statement are audioStream (which is a constant) and
audioManager which is instance of the Android system AudioManager service returned by the API
call getSystemService() and hence is not tainted.
